

## Working with ner6

## **2. Create the test CA configuration file**

While you could simply enter all the configuration information into the command line, c

```
basicConstraints = CA:true
```

The two *dir* entries should be set to the path to the *testCA* directory created earlier. The *root\_ca\_dn*

- a. Reset the OPENSSL\_CONF environment variable to the default *openssl.cnf* file. Generating a request has nothing to do with a 0 before it is actually submitted. It is safe to point OPENSSL\_CONF to the default configuration file because it will force the request command to use the default configuration file.

Answer 'y' at the next two prompts, then at the conclusion of this step, several t cl cl c
