The ALSA Driver API

The ALSA Driver API

Table of Contents

Chapter 1. Management of Cards and Devices

1.1. Card Management

snd_card_create

Name

`snd_card_create` — create and initialize a soundcard structure

Synopsis

```
int snd_card_create (int idx, const char * xid, struct module
* module, int extra_size, struct snd_card ** card_ret);
```

Arguments

idx

    card index (address) [0 ... (SNDRV_CARDS-1)]

xid

    card identification (ASCII string)

module

    top level module for locking

`extra_size`

allocate this extra size after the main soundcard structure

`card_ret`

the pointer to store the created card instance

Description

Creates and initializes a soundcard structure.

The function allocates snd_card instance via kzalloc with the given space for the driver to use freely. The allocated struct is stored in the given card_ret pointer.

Returns zero if successful or a negative error code.

snd_card_disconnect

LINUX

Kernel Hackers ManualJuly 2010

Name

`snd_card_disconnect` — disconnect all APIs from the file-operations (user space)

Synopsis

```
int snd_card_disconnect (struct snd_card * card);
```

Arguments

`card`

> soundcard structure

Description

Disconnects all APIs from the file-operations (user space).

Returns zero, otherwise a negative error code.

Note

The current implementation replaces all active file->f_op with special dummy file operations (they do nothing except release).

snd_card_set_id

LINUX

Kernel Hackers ManualJuly 2010

Name

`snd_card_set_id` — set card identification name

Synopsis

```
void snd_card_set_id (struct snd_card * card, const char *
nid);
```

Arguments

`card`

 soundcard structure

`nid`

 new identification string

Description

This function sets the card identification and checks for name collisions.

snd_card_register

Name

`snd_card_register` — register the soundcard

Synopsis

```
int snd_card_register (struct snd_card * card);
```

Arguments

`card`

 soundcard structure

Description

This function registers all the devices assigned to the soundcard. Until calling this, the ALSA control interface is blocked from the external accesses. Thus, you should call this function at the end of the initialization of the card.

Returns zero otherwise a negative error code if the registrain failed.

snd_component_add

LINUX

Kernel Hackers ManualJuly 2010

Name

snd_component_add — add a component string

Synopsis

int **snd_component_add** (struct snd_card * *card*, const char * *component*);

Arguments

card

soundcard structure

component

the component id string

Description

This function adds the component id string to the supported list. The component can be referred from the alsa-lib.

Returns zero otherwise a negative error code.

snd_card_file_add

Name

snd_card_file_add — add the file to the file list of the card

Synopsis

```
int snd_card_file_add (struct snd_card * card, struct file *
file);
```

Arguments

card

soundcard structure

file

file pointer

Description

This function adds the file to the file linked-list of the card. This linked-list is used to keep tracking the connection state, and to avoid the release of busy resources by hotplug.

Returns zero or a negative error code.

snd_card_file_remove

Name

snd_card_file_remove — remove the file from the file list

Synopsis

int **snd_card_file_remove** (struct snd_card * *card*, struct file * *file*);

Arguments

card

 soundcard structure

file

 file pointer

Description

This function removes the file formerly added to the card via `snd_card_file_add` function. If all files are removed and `snd_card_free_when_closed` was called beforehand, it processes the pending release of resources.

Returns zero or a negative error code.

snd_power_wait

LINUX

Kernel Hackers ManualJuly 2010

Name

`snd_power_wait` — wait until the power-state is changed.

Synopsis

```
int snd_power_wait (struct snd_card * card, unsigned int power_state);
```

Arguments

`card`

soundcard structure

`power_state`

expected power state

Description

Waits until the power-state is changed.

Note

the power lock must be active before call.

1.2. Device Components

snd_device_new

Name

`snd_device_new` — create an ALSA device component

Synopsis

```
int snd_device_new (struct snd_card * card, snd_device_type_t
type, void * device_data, struct snd_device_ops * ops);
```

Arguments

`card`

　the card instance

`type`

　the device type, SNDRV_DEV_XXX

`device_data`

　the data pointer of this device

`ops`

>   the operator table

Description

Creates a new device component for the given data pointer. The device will be assigned to the card and managed together by the card.

The data pointer plays a role as the identifier, too, so the pointer address must be unique and unchanged.

Returns zero if successful, or a negative error code on failure.

snd_device_free

LINUX

Kernel Hackers ManualJuly 2010

Name

`snd_device_free` — release the device from the card

Synopsis

```
int snd_device_free (struct snd_card * card, void *
device_data);
```

Arguments

`card`

>   the card instance

device_data

 the data pointer to release

Description

Removes the device from the list on the card and invokes the callbacks, dev_disconnect and dev_free, corresponding to the state. Then release the device.

Returns zero if successful, or a negative error code on failure or if the device not found.

snd_device_register

Name

`snd_device_register` — register the device

Synopsis

```
int snd_device_register (struct snd_card * card, void * device_data);
```

Arguments

card

 the card instance

device_data

 the data pointer to register

Description

Registers the device which was already created via `snd_device_new`. Usually this is called from `snd_card_register`, but it can be called later if any new devices are created after invocation of `snd_card_register`.

Returns zero if successful, or a negative error code on failure or if the device not found.

1.3. Module requests and Device File Entries

snd_request_card

LINUX

Kernel Hackers ManualJuly 2010

Name

`snd_request_card` — try to load the card module

Synopsis

```
void snd_request_card (int card);
```

Arguments

card

the card number

Description

Tries to load the module "snd-card-X" for the given card number via request_module. Returns immediately if already loaded.

snd_lookup_minor_data

Name

`snd_lookup_minor_data` — get user data of a registered device

Synopsis

`void * ` **`snd_lookup_minor_data`** ` (unsigned int ` *`minor`*`, int ` *`type`*`);`

Arguments

`minor`

the minor number

`type`

device type (SNDRV_DEVICE_TYPE_XXX)

Description

Checks that a minor device with the specified type is registered, and returns its user data pointer.

snd_register_device_for_dev

Name

`snd_register_device_for_dev` — Register the ALSA device file for the card

Synopsis

```
int snd_register_device_for_dev (int type, struct snd_card *
card, int dev, const struct file_operations * f_ops, void *
private_data, const char * name, struct device * device);
```

Arguments

`type`

> the device type, SNDRV_DEVICE_TYPE_XXX

`card`

> the card instance

`dev`

> the device index

`f_ops`

> the file operations

`private_data`

> user pointer for f_ops->`open`

`name`

> the device file name

device

> the struct device to link this new device to

Description

Registers an ALSA device file for the given card. The operators have to be set in reg parameter.

Returns zero if successful, or a negative error code on failure.

snd_unregister_device

Name

snd_unregister_device — unregister the device on the given card

Synopsis

int **snd_unregister_device** (int *type*, struct snd_card * *card*, int *dev*);

Arguments

type

> the device type, SNDRV_DEVICE_TYPE_XXX

card

> the card instance

```
dev
```

the device index

Description

Unregisters the device file already registered via `snd_register_device`.

Returns zero if sucecessful, or a negative error code on failure

1.4. Memory Management Helpers

copy_to_user_fromio

LINUX

Kernel Hackers ManualJuly 2010

Name

`copy_to_user_fromio` — copy data from mmio-space to user-space

Synopsis

```
int copy_to_user_fromio (void __user * dst, const volatile
void __iomem * src, size_t count);
```

Arguments

```
dst
```

the destination pointer on user-space

src

    the source pointer on mmio

count

    the data size to copy in bytes

Description

Copies the data from mmio-space to user-space.

Returns zero if successful, or non-zero on failure.

copy_from_user_toio

LINUX

Kernel Hackers ManualJuly 2010

Name

`copy_from_user_toio` — copy data from user-space to mmio-space

Synopsis

```
int copy_from_user_toio (volatile void __iomem * dst, const
void __user * src, size_t count);
```

Arguments

dst

    the destination pointer on mmio-space

src

the source pointer on user-space

count

the data size to copy in bytes

Description

Copies the data from user-space to mmio-space.

Returns zero if successful, or non-zero on failure.

snd_malloc_pages

LINUX

Kernel Hackers ManualJuly 2010

Name

snd_malloc_pages — allocate pages with the given size

Synopsis

void * **snd_malloc_pages** (size_t *size*, gfp_t *gfp_flags*);

Arguments

size

the size to allocate in bytes

gfp_flags

> the allocation conditions, GFP_XXX

Description

Allocates the physically contiguous pages with the given size.

Returns the pointer of the buffer, or NULL if no enoguh memory.

snd_free_pages

Name

snd_free_pages — release the pages

Synopsis

```
void snd_free_pages (void * ptr, size_t size);
```

Arguments

ptr

> the buffer pointer to release

size

> the allocated buffer size

Description

Releases the buffer allocated via `snd_malloc_pages`.

snd_dma_alloc_pages

Name

`snd_dma_alloc_pages` — allocate the buffer area according to the given type

Synopsis

```
int snd_dma_alloc_pages (int type, struct device * device,
size_t size, struct snd_dma_buffer * dmab);
```

Arguments

type

the DMA buffer type

device

the device pointer

size

the buffer size to allocate

dmab

buffer allocation record to store the allocated data

Description

Calls the memory-allocator function for the corresponding buffer type.

Returns zero if the buffer with the given size is allocated successfuly, other a negative value at error.

snd_dma_alloc_pages_fallback

LINUX

Kernel Hackers ManualJuly 2010

Name

`snd_dma_alloc_pages_fallback` — allocate the buffer area according to the given type with fallback

Synopsis

```
int snd_dma_alloc_pages_fallback (int type, struct device *
device, size_t size, struct snd_dma_buffer * dmab);
```

Arguments

`type`

the DMA buffer type

`device`

the device pointer

`size`

the buffer size to allocate

`dmab`

buffer allocation record to store the allocated data

Description

Calls the memory-allocator function for the corresponding buffer type. When no space is left, this function reduces the size and tries to allocate again. The size actually allocated is stored in res_size argument.

Returns zero if the buffer with the given size is allocated successfuly, other a negative value at error.

snd_dma_free_pages

Name

`snd_dma_free_pages` — release the allocated buffer

Synopsis

`void` **`snd_dma_free_pages`** `(struct snd_dma_buffer * dmab);`

Arguments

`dmab`

the buffer allocation record to release

Description

Releases the allocated buffer via `snd_dma_alloc_pages`.

snd_dma_get_reserved_buf

LINUX

Kernel Hackers ManualJuly 2010

Name

`snd_dma_get_reserved_buf` — get the reserved buffer for the given device

Synopsis

```
size_t snd_dma_get_reserved_buf (struct snd_dma_buffer * dmab,
unsigned int id);
```

Arguments

dmab

the buffer allocation record to store

id

the buffer id

Description

Looks for the reserved-buffer list and re-uses if the same buffer is found in the list. When the buffer is found, it's removed from the free list.

Returns the size of buffer if the buffer is found, or zero if not found.

snd_dma_reserve_buf

Name

snd_dma_reserve_buf — reserve the buffer

Synopsis

```
int snd_dma_reserve_buf (struct snd_dma_buffer * dmab,
unsigned int id);
```

Arguments

dmab

>   the buffer to reserve

id

>   the buffer id

Description

Reserves the given buffer as a reserved buffer.

Returns zero if successful, or a negative code at error.

Chapter 2. PCM API

2.1. PCM Core

snd_pcm_new_stream

Name

`snd_pcm_new_stream` — create a new PCM stream

Synopsis

```
int snd_pcm_new_stream (struct snd_pcm * pcm, int stream, int
substream_count);
```

Arguments

pcm

   the pcm instance

stream

   the stream direction, SNDRV_PCM_STREAM_XXX

substream_count

   the number of substreams

Description

Creates a new stream for the pcm. The corresponding stream on the pcm must have been empty before calling this, i.e. zero must be given to the argument of `snd_pcm_new`.

Returns zero if successful, or a negative error code on failure.

snd_pcm_new

LINUX

Kernel Hackers ManualJuly 2010

Name

`snd_pcm_new` — create a new PCM instance

Synopsis

```
int snd_pcm_new (struct snd_card * card, const char * id, int
device, int playback_count, int capture_count, struct snd_pcm
** rpcm);
```

Arguments

card

the card instance

id

the id string

device

the device index (zero based)

playback_count

>   the number of substreams for playback

capture_count

>   the number of substreams for capture

rpcm

>   the pointer to store the new pcm instance

Description

Creates a new PCM instance.

The pcm operators have to be set afterwards to the new instance via `snd_pcm_set_ops`.

Returns zero if successful, or a negative error code on failure.

snd_pcm_set_ops

Name

`snd_pcm_set_ops` — set the PCM operators

Synopsis

```
void snd_pcm_set_ops (struct snd_pcm * pcm, int direction,
struct snd_pcm_ops * ops);
```

Arguments

`pcm`

>   the pcm instance

`direction`

>   stream direction, SNDRV_PCM_STREAM_XXX

`ops`

>   the operator table

Description

Sets the given PCM operators to the pcm instance.

snd_pcm_set_sync

LINUX

Kernel Hackers ManualJuly 2010

Name

`snd_pcm_set_sync` — set the PCM sync id

Synopsis

`void` **`snd_pcm_set_sync`** `(struct snd_pcm_substream *` *`substream`*`);`

Arguments

substream

 the pcm substream

Description

Sets the PCM sync identifier for the card.

snd_interval_refine

Name

snd_interval_refine — refine the interval value of configurator

Synopsis

```
int snd_interval_refine (struct snd_interval * i, const struct
snd_interval * v);
```

Arguments

i

 the interval value to refine

v

 the interval value to refer to

Description

Refines the interval value with the reference value. The interval is changed to the range satisfying both intervals. The interval status (min, max, integer, etc.) are evaluated.

Returns non-zero if the value is changed, zero if not changed.

snd_interval_ratnum

Name

`snd_interval_ratnum` — refine the interval value

Synopsis

```
int snd_interval_ratnum (struct snd_interval * i, unsigned int
rats_count, struct snd_ratnum * rats, unsigned int * nump,
unsigned int * denp);
```

Arguments

i

    interval to refine

rats_count

    number of ratnum_t

rats

    ratnum_t array

`nump`

pointer to store the resultant numerator

`denp`

pointer to store the resultant denominator

Description

Returns non-zero if the value is changed, zero if not changed.

snd_interval_list

Name

`snd_interval_list` — refine the interval value from the list

Synopsis

```
int snd_interval_list (struct snd_interval * i, unsigned int
count, unsigned int * list, unsigned int mask);
```

Arguments

`i`

the interval value to refine

`count`

the number of elements in the list

list

> the value list

mask

> the bit-mask to evaluate

Description

Refines the interval value from the list. When mask is non-zero, only the elements corresponding to bit 1 are evaluated.

Returns non-zero if the value is changed, zero if not changed.

snd_pcm_hw_rule_add

Name

snd_pcm_hw_rule_add — add the hw-constraint rule

Synopsis

```
int snd_pcm_hw_rule_add (struct snd_pcm_runtime * runtime,
unsigned int cond, int var, snd_pcm_hw_rule_func_t func, void
* private, int dep,  ...);
```

Arguments

runtime

> the pcm runtime instance

cond

> condition bits

var

> the variable to evaluate

func

> the evaluation function

private

> the private data pointer passed to function

dep

> the dependent variables

...

> variable arguments

Description

Returns zero if successful, or a negative error code on failure.

snd_pcm_hw_constraint_integer

LINUX

Kernel Hackers ManualJuly 2010

Name

snd_pcm_hw_constraint_integer — apply an integer constraint to an interval

Synopsis

```
int snd_pcm_hw_constraint_integer (struct snd_pcm_runtime *
runtime, snd_pcm_hw_param_t var);
```

Arguments

runtime

> PCM runtime instance

var

> hw_params variable to apply the integer constraint

Description

Apply the constraint of integer to an interval parameter.

snd_pcm_hw_constraint_minmax

Name

snd_pcm_hw_constraint_minmax — apply a min/max range constraint to an interval

Synopsis

```
int snd_pcm_hw_constraint_minmax (struct snd_pcm_runtime *
runtime, snd_pcm_hw_param_t var, unsigned int min, unsigned
```

```
int max);
```

Arguments

runtime

    PCM runtime instance

var

    hw_params variable to apply the range

min

    the minimal value

max

    the maximal value

Description

Apply the min/max range constraint to an interval parameter.

snd_pcm_hw_constraint_list

LINUX

Kernel Hackers ManualJuly 2010

Name

snd_pcm_hw_constraint_list — apply a list of constraints to a parameter

Synopsis

```
int snd_pcm_hw_constraint_list (struct snd_pcm_runtime *
runtime, unsigned int cond, snd_pcm_hw_param_t var, struct
snd_pcm_hw_constraint_list * l);
```

Arguments

runtime

  PCM runtime instance

cond

  condition bits

var

  hw_params variable to apply the list constraint

l

  list

Description

Apply the list of constraints to an interval parameter.

snd_pcm_hw_constraint_ratnums

LINUX

Kernel Hackers ManualJuly 2010

Name

snd_pcm_hw_constraint_ratnums — apply ratnums constraint to a

parameter

Synopsis

```
int snd_pcm_hw_constraint_ratnums (struct snd_pcm_runtime *
runtime, unsigned int cond, snd_pcm_hw_param_t var, struct
snd_pcm_hw_constraint_ratnums * r);
```

Arguments

runtime

>   PCM runtime instance

cond

>   condition bits

var

>   hw_params variable to apply the ratnums constraint

r

>   struct snd_ratnums constriants

snd_pcm_hw_constraint_ratdens

LINUX

Kernel Hackers ManualJuly 2010

Name

snd_pcm_hw_constraint_ratdens — apply ratdens constraint to a
parameter

Synopsis

```
int snd_pcm_hw_constraint_ratdens (struct snd_pcm_runtime *
runtime, unsigned int cond, snd_pcm_hw_param_t var, struct
snd_pcm_hw_constraint_ratdens * r);
```

Arguments

runtime

PCM runtime instance

cond

condition bits

var

hw_params variable to apply the ratdens constraint

r

struct snd_ratdens constriants

snd_pcm_hw_constraint_msbits

LINUX

Kernel Hackers ManualJuly 2010

Name

snd_pcm_hw_constraint_msbits — add a hw constraint msbits rule

Synopsis

```
int snd_pcm_hw_constraint_msbits (struct snd_pcm_runtime *
runtime, unsigned int cond, unsigned int width, unsigned int
msbits);
```

Arguments

runtime

   PCM runtime instance

cond

   condition bits

width

   sample bits width

msbits

   msbits width

snd_pcm_hw_constraint_step

Name

snd_pcm_hw_constraint_step — add a hw constraint step rule

Synopsis

```
int snd_pcm_hw_constraint_step (struct snd_pcm_runtime *
runtime, unsigned int cond, snd_pcm_hw_param_t var, unsigned
long step);
```

Arguments

runtime

    PCM runtime instance

cond

    condition bits

var

    hw_params variable to apply the step constraint

step

    step size

snd_pcm_hw_constraint_pow2

Name

snd_pcm_hw_constraint_pow2 — add a hw constraint power-of-2 rule

Synopsis

```
int snd_pcm_hw_constraint_pow2 (struct snd_pcm_runtime *
runtime, unsigned int cond, snd_pcm_hw_param_t var);
```

Arguments

runtime

> PCM runtime instance

cond

> condition bits

var

> hw_params variable to apply the power-of-2 constraint

snd_pcm_hw_param_value

Name

snd_pcm_hw_param_value — return *params* field *var* value

Synopsis

```
int snd_pcm_hw_param_value (const struct snd_pcm_hw_params *
params, snd_pcm_hw_param_t var, int * dir);
```

Arguments

`params`

>   the hw_params instance

`var`

>   parameter to retrieve

`dir`

>   pointer to the direction (-1,0,1) or `NULL`

Description

Return the value for field `var` if it's fixed in configuration space defined by `params`. Return `-EINVAL` otherwise.

snd_pcm_hw_param_first

LINUX

Kernel Hackers ManualJuly 2010

Name

`snd_pcm_hw_param_first` — refine config space and return minimum value

Synopsis

```
int snd_pcm_hw_param_first (struct snd_pcm_substream * pcm,
struct snd_pcm_hw_params * params, snd_pcm_hw_param_t var, int
* dir);
```

Arguments

`pcm`

> PCM instance

`params`

> the hw_params instance

`var`

> parameter to retrieve

`dir`

> pointer to the direction (-1,0,1) or `NULL`

Description

Inside configuration space defined by `params` remove from `var` all values > minimum. Reduce configuration space accordingly. Return the minimum.

snd_pcm_hw_param_last

Name

`snd_pcm_hw_param_last` — refine config space and return maximum value

Synopsis

```
int snd_pcm_hw_param_last (struct snd_pcm_substream * pcm,
struct snd_pcm_hw_params * params, snd_pcm_hw_param_t var, int
* dir);
```

Arguments

`pcm`

   PCM instance

`params`

   the hw_params instance

`var`

   parameter to retrieve

`dir`

   pointer to the direction (-1,0,1) or `NULL`

Description

Inside configuration space defined by `params` remove from `var` all values <
maximum. Reduce configuration space accordingly. Return the maximum.

snd_pcm_lib_ioctl

Name

`snd_pcm_lib_ioctl` — a generic PCM ioctl callback

Synopsis

```
int snd_pcm_lib_ioctl (struct snd_pcm_substream * substream,
unsigned int cmd, void * arg);
```

Arguments

substream

    the pcm substream instance

cmd

    ioctl command

arg

    ioctl argument

Description

Processes the generic ioctl commands for PCM. Can be passed as the ioctl callback for PCM ops.

Returns zero if successful, or a negative error code on failure.

snd_pcm_period_elapsed

LINUX

Kernel Hackers ManualJuly 2010

Name

`snd_pcm_period_elapsed` — update the pcm status for the next period

Synopsis

```
void snd_pcm_period_elapsed (struct snd_pcm_substream *
substream);
```

Arguments

substream

>   the pcm substream instance

Description

This function is called from the interrupt handler when the PCM has processed the period size. It will update the current pointer, wake up sleepers, etc.

Even if more than one periods have elapsed since the last call, you have to call this only once.

snd_pcm_stop

LINUX

Kernel Hackers ManualJuly 2010

Name

snd_pcm_stop — try to stop all running streams in the substream group

Synopsis

```
int snd_pcm_stop (struct snd_pcm_substream * substream, int
state);
```

Arguments

substream

> the PCM substream instance

state

> PCM state after stopping the stream

Description

The state of each stream is then changed to the given state unconditionally.

snd_pcm_suspend

LINUX

Kernel Hackers ManualJuly 2010

Name

snd_pcm_suspend — trigger SUSPEND to all linked streams

Synopsis

int **snd_pcm_suspend** (struct snd_pcm_substream * *substream*);

Arguments

substream

>   the PCM substream

Description

After this call, all streams are changed to SUSPENDED state.

snd_pcm_suspend_all

LINUX

Kernel Hackers ManualJuly 2010

Name

snd_pcm_suspend_all — trigger SUSPEND to all substreams in the given pcm

Synopsis

```
int snd_pcm_suspend_all (struct snd_pcm * pcm);
```

Arguments

pcm

>   the PCM instance

Description

After this call, all streams are changed to SUSPENDED state.

2.2. PCM Format Helpers

snd_pcm_format_signed

LINUX

Kernel Hackers ManualJuly 2010

Name

`snd_pcm_format_signed` — Check the PCM format is signed linear

Synopsis

```
int snd_pcm_format_signed (snd_pcm_format_t format);
```

Arguments

format

the format to check

Description

Returns 1 if the given PCM format is signed linear, 0 if unsigned linear, and a negative error code for non-linear formats.

snd_pcm_format_unsigned

Name

snd_pcm_format_unsigned — Check the PCM format is unsigned linear

Synopsis

int **snd_pcm_format_unsigned** (snd_pcm_format_t *format*);

Arguments

format

the format to check

Description

Returns 1 if the given PCM format is unsigned linear, 0 if signed linear, and a negative error code for non-linear formats.

snd_pcm_format_linear

Name

snd_pcm_format_linear — Check the PCM format is linear

Synopsis

int **snd_pcm_format_linear** (snd_pcm_format_t *format*);

Arguments

format

the format to check

Description

Returns 1 if the given PCM format is linear, 0 if not.

snd_pcm_format_little_endian

Name

snd_pcm_format_little_endian — Check the PCM format is little-endian

Synopsis

```
int snd_pcm_format_little_endian (snd_pcm_format_t format);
```

Arguments

format

> the format to check

Description

Returns 1 if the given PCM format is little-endian, 0 if big-endian, or a negative error code if endian not specified.

snd_pcm_format_big_endian

Name

snd_pcm_format_big_endian — Check the PCM format is big-endian

Synopsis

```
int snd_pcm_format_big_endian (snd_pcm_format_t format);
```

Arguments

format

> the format to check

Description

Returns 1 if the given PCM format is big-endian, 0 if little-endian, or a negative error code if endian not specified.

snd_pcm_format_width

Name

`snd_pcm_format_width` — return the bit-width of the format

Synopsis

```
int snd_pcm_format_width (snd_pcm_format_t format);
```

Arguments

format

> the format to check

Description

Returns the bit-width of the format, or a negative error code if unknown format.

snd_pcm_format_physical_width

Name

`snd_pcm_format_physical_width` — return the physical bit-width of the format

Synopsis

```
int snd_pcm_format_physical_width (snd_pcm_format_t format);
```

Arguments

format

the format to check

Description

Returns the physical bit-width of the format, or a negative error code if unknown format.

snd_pcm_format_size

Name

`snd_pcm_format_size` — return the byte size of samples on the given format

Synopsis

`ssize_t` **`snd_pcm_format_size`** `(snd_pcm_format_t` *`format`*`, size_t` *`samples`*`);`

Arguments

format

    the format to check

samples

    sampling rate

Description

Returns the byte size of the given samples for the format, or a negative error code if unknown format.

snd_pcm_format_silence_64

Name

snd_pcm_format_silence_64 — return the silent data in 8 bytes array

Synopsis

```
const unsigned char * snd_pcm_format_silence_64
(snd_pcm_format_t format);
```

Arguments

format

   the format to check

Description

Returns the format pattern to fill or NULL if error.

snd_pcm_format_set_silence

Name

snd_pcm_format_set_silence — set the silence data on the buffer

Synopsis

```
int snd_pcm_format_set_silence (snd_pcm_format_t format, void
* data, unsigned int samples);
```

Arguments

format

the PCM format

data

the buffer pointer

samples

the number of samples to set silence

Description

Sets the silence data on the buffer for the given samples.

Returns zero if successful, or a negative error code on failure.

snd_pcm_limit_hw_rates

LINUX

Kernel Hackers ManualJuly 2010

Name

snd_pcm_limit_hw_rates — determine rate_min/rate_max fields

Synopsis

```
int snd_pcm_limit_hw_rates (struct snd_pcm_runtime * runtime);
```

Arguments

runtime

>   the runtime instance

Description

Determines the rate_min and rate_max fields from the rates bits of the given runtime->hw.

Returns zero if successful.

snd_pcm_rate_to_rate_bit

Name

snd_pcm_rate_to_rate_bit — converts sample rate to SNDRV_PCM_RATE_xxx bit

Synopsis

```
unsigned int snd_pcm_rate_to_rate_bit (unsigned int rate);
```

Arguments

rate

   the sample rate to convert

Description

Returns the SNDRV_PCM_RATE_xxx flag that corresponds to the given rate, or SNDRV_PCM_RATE_KNOT for an unknown rate.

2.3. PCM Memory Management

snd_pcm_lib_preallocate_free_for_all

LINUX

Kernel Hackers ManualJuly 2010

Name

snd_pcm_lib_preallocate_free_for_all — release all pre-allocated buffers on the pcm

Synopsis

```
int snd_pcm_lib_preallocate_free_for_all (struct snd_pcm *
pcm);
```

Arguments

pcm

> the pcm instance

Description

Releases all the pre-allocated buffers on the given pcm.

Returns zero if successful, or a negative error code on failure.

snd_pcm_lib_preallocate_pages

Name

`snd_pcm_lib_preallocate_pages` — pre-allocation for the given DMA type

Synopsis

```
int snd_pcm_lib_preallocate_pages (struct snd_pcm_substream *
substream, int type, struct device * data, size_t size, size_t
max);
```

Arguments

substream

> the pcm substream instance

type

DMA type (SNDRV_DMA_TYPE_*)

data

DMA type dependant data

size

the requested pre-allocation size in bytes

max

the max. allowed pre-allocation size

Description

Do pre-allocation for the given DMA buffer type.

When substream->dma_buf_id is set, the function tries to look for the reserved buffer, and the buffer is not freed but reserved at destruction time. The dma_buf_id must be unique for all systems (in the same DMA buffer type) e.g. using `snd_dma_pci_buf_id`.

Returns zero if successful, or a negative error code on failure.

snd_pcm_lib_preallocate_pages_for_all

LINUX

Kernel Hackers ManualJuly 2010

Name

`snd_pcm_lib_preallocate_pages_for_all` — pre-allocation for continous memory type (all substreams)

Synopsis

```
int snd_pcm_lib_preallocate_pages_for_all (struct snd_pcm *
pcm, int type, void * data, size_t size, size_t max);
```

Arguments

pcm

 the pcm instance

type

 DMA type (SNDRV_DMA_TYPE_*)

data

 DMA type dependant data

size

 the requested pre-allocation size in bytes

max

 the max. allowed pre-allocation size

Description

Do pre-allocation to all substreams of the given pcm for the specified DMA type.

Returns zero if successful, or a negative error code on failure.

snd_pcm_sgbuf_ops_page

LINUX

Name

`snd_pcm_sgbuf_ops_page` — get the page struct at the given offset

Synopsis

`struct page *` **`snd_pcm_sgbuf_ops_page`** `(struct snd_pcm_substream * substream, unsigned long offset);`

Arguments

`substream`

the pcm substream instance

`offset`

the buffer offset

Description

Returns the page struct at the given buffer offset. Used as the page callback of PCM ops.

snd_pcm_lib_malloc_pages

LINUX

Name

`snd_pcm_lib_malloc_pages` — allocate the DMA buffer

Synopsis

```
int snd_pcm_lib_malloc_pages (struct snd_pcm_substream *
substream, size_t size);
```

Arguments

substream

   the substream to allocate the DMA buffer to

size

   the requested buffer size in bytes

Description

Allocates the DMA buffer on the BUS type given earlier to
`snd_pcm_lib_preallocate_xxx_pages`.

Returns 1 if the buffer is changed, 0 if not changed, or a negative code on failure.

snd_pcm_lib_free_pages

LINUX

Name

snd_pcm_lib_free_pages — release the allocated DMA buffer.

Synopsis

```
int snd_pcm_lib_free_pages (struct snd_pcm_substream *
substream);
```

Arguments

substream

the substream to release the DMA buffer

Description

Releases the DMA buffer allocated via snd_pcm_lib_malloc_pages.

Returns zero if successful, or a negative error code on failure.

snd_pcm_lib_free_vmalloc_buffer

LINUX

Name

snd_pcm_lib_free_vmalloc_buffer — free vmalloc buffer

Synopsis

```
int snd_pcm_lib_free_vmalloc_buffer (struct snd_pcm_substream
* substream);
```

Arguments

substream

> the substream with a buffer allocated by
> snd_pcm_lib_alloc_vmalloc_buffer

snd_pcm_lib_get_vmalloc_page

Name

snd_pcm_lib_get_vmalloc_page — map vmalloc buffer offset to page
struct

Synopsis

```
struct page * snd_pcm_lib_get_vmalloc_page (struct
snd_pcm_substream * substream, unsigned long offset);
```

Arguments

`substream`

> the substream with a buffer allocated by
> `snd_pcm_lib_alloc_vmalloc_buffer`

`offset`

> offset in the buffer

Description

This function is to be used as the page callback in the PCM ops.

Chapter 3. Control/Mixer API

3.1. General Control Interface

snd_ctl_new1

Name

`snd_ctl_new1` — create a control instance from the template

Synopsis

```
struct snd_kcontrol * snd_ctl_new1 (const struct
snd_kcontrol_new * ncontrol, void * private_data);
```

Arguments

ncontrol

  the initialization record

private_data

  the private data to set

Description

Allocates a new struct snd_kcontrol instance and initialize from the given template. When the access field of ncontrol is 0, it's assumed as READWRITE access. When the count field is 0, it's assumes as one.

Returns the pointer of the newly generated instance, or NULL on failure.

snd_ctl_free_one

Name

`snd_ctl_free_one` — release the control instance

Synopsis

void **snd_ctl_free_one** (struct snd_kcontrol * *kcontrol*);

Arguments

kcontrol

the control instance

Description

Releases the control instance created via `snd_ctl_new` or `snd_ctl_new1`. Don't call this after the control was added to the card.

snd_ctl_add

Name

`snd_ctl_add` — add the control instance to the card

Synopsis

`int **snd_ctl_add** (struct snd_card * card, struct snd_kcontrol * kcontrol);`

Arguments

`card`

the card instance

`kcontrol`

the control instance to add

Description

Adds the control instance created via `snd_ctl_new` or `snd_ctl_new1` to the given card. Assigns also an unique numid used for fast search.

Returns zero if successful, or a negative error code on failure.

It frees automatically the control which cannot be added.

snd_ctl_remove

Name

snd_ctl_remove — remove the control from the card and release it

Synopsis

int **snd_ctl_remove** (struct snd_card * *card*, struct
snd_kcontrol * *kcontrol*);

Arguments

card

  the card instance

kcontrol

  the control instance to remove

Description

Removes the control from the card and then releases the instance. You don't need to
call snd_ctl_free_one. You must be in the write lock -
down_write(card->controls_rwsem).

Returns 0 if successful, or a negative error code on failure.

snd_ctl_remove_id

Name

`snd_ctl_remove_id` — remove the control of the given id and release it

Synopsis

```
int snd_ctl_remove_id (struct snd_card * card, struct
snd_ctl_elem_id * id);
```

Arguments

card

　the card instance

id

　the control id to remove

Description

Finds the control instance with the given id, removes it from the card list and releases it.

Returns 0 if successful, or a negative error code on failure.

snd_ctl_rename_id

Name

`snd_ctl_rename_id` — replace the id of a control on the card

Synopsis

```
int snd_ctl_rename_id (struct snd_card * card, struct
snd_ctl_elem_id * src_id, struct snd_ctl_elem_id * dst_id);
```

Arguments

card

    the card instance

src_id

    the old id

dst_id

    the new id

Description

Finds the control with the old id from the card, and replaces the id with the new one.

Returns zero if successful, or a negative error code on failure.

snd_ctl_find_numid

Name

`snd_ctl_find_numid` — find the control instance with the given number-id

Synopsis

`struct snd_kcontrol *` **`snd_ctl_find_numid`** `(struct snd_card *` `card`, `unsigned int` `numid`);

Arguments

`card`

the card instance

`numid`

the number-id to search

Description

Finds the control instance with the given number-id from the card.

Returns the pointer of the instance if found, or NULL if not.

The caller must down card->controls_rwsem before calling this function (if the race condition can happen).

snd_ctl_find_id

Name

`snd_ctl_find_id` — find the control instance with the given id

Synopsis

`struct snd_kcontrol *` **`snd_ctl_find_id`** `(struct snd_card *` *`card`*`, struct snd_ctl_elem_id *` *`id`*`);`

Arguments

`card`

　　the card instance

`id`

　　the id to search

Description

Finds the control instance with the given id from the card.

Returns the pointer of the instance if found, or NULL if not.

The caller must down card->controls_rwsem before calling this function (if the race condition can happen).

3.2. AC97 Codec API

snd_ac97_write

Name

`snd_ac97_write` — write a value on the given register

Synopsis

```
void snd_ac97_write (struct snd_ac97 * ac97, unsigned short
reg, unsigned short value);
```

Arguments

ac97

    the ac97 instance

reg

    the register to change

value

    the value to set

Description

Writes a value on the given register. This will invoke the write callback directly after the register check. This function doesn't change the register cache unlike `#snd_ca97_write_cache`, so use this only when you don't want to reflect the change to the suspend/resume state.

snd_ac97_read

Name

`snd_ac97_read` — read a value from the given register

Synopsis

```
unsigned short snd_ac97_read (struct snd_ac97 * ac97, unsigned
short reg);
```

Arguments

ac97

    the ac97 instance

reg

    the register to read

Description

Reads a value from the given register. This will invoke the read callback directly after the register check.

Returns the read value.

snd_ac97_write_cache

Name

`snd_ac97_write_cache` — write a value on the given register and update the cache

Synopsis

`void` **`snd_ac97_write_cache`** `(struct snd_ac97 *` *`ac97`*`, unsigned short` *`reg`*`, unsigned short` *`value`*`);`

Arguments

ac97

the ac97 instance

reg

the register to change

value

the value to set

Description

Writes a value on the given register and updates the register cache. The cached values are used for the cached-read and the suspend/resume.

snd_ac97_update

Name

snd_ac97_update — update the value on the given register

Synopsis

int **snd_ac97_update** (struct snd_ac97 * *ac97*, unsigned short *reg*, unsigned short *value*);

Arguments

ac97

   the ac97 instance

reg

   the register to change

value

   the value to set

Description

Compares the value with the register cache and updates the value only when the value is changed.

Returns 1 if the value is changed, 0 if no change, or a negative code on failure.

snd_ac97_update_bits

Name

snd_ac97_update_bits — update the bits on the given register

Synopsis

int **snd_ac97_update_bits** (struct snd_ac97 * *ac97*, unsigned short *reg*, unsigned short *mask*, unsigned short *value*);

Arguments

ac97

    the ac97 instance

reg

    the register to change

mask

    the bit-mask to change

value

    the value to set

Description

Updates the masked-bits on the given register only when the value is changed.

Returns 1 if the bits are changed, 0 if no change, or a negative code on failure.

snd_ac97_get_short_name

Name

snd_ac97_get_short_name — retrieve codec name

Synopsis

const char * **snd_ac97_get_short_name** (struct snd_ac97 * *ac97*);

Arguments

ac97

> the codec instance

Description

Returns the short identifying name of the codec.

snd_ac97_bus

Name

snd_ac97_bus — create an AC97 bus component

Synopsis

```
int snd_ac97_bus (struct snd_card * card, int num, struct
snd_ac97_bus_ops * ops, void * private_data, struct
snd_ac97_bus ** rbus);
```

Arguments

card

    the card instance

num

    the bus number

ops

    the bus callbacks table

private_data

    private data pointer for the new instance

rbus

    the pointer to store the new AC97 bus instance.

Description

Creates an AC97 bus component. An struct snd_ac97_bus instance is newly
allocated and initialized.

The ops table must include valid callbacks (at least read and write). The other
callbacks, wait and reset, are not mandatory.

The clock is set to 48000. If another clock is needed, set (*rbus)->clock manually.

The AC97 bus instance is registered as a low-level device, so you don't have to
release it manually.

Returns zero if successful, or a negative error code on failure.

snd_ac97_mixer

Name

`snd_ac97_mixer` — create an Codec97 component

Synopsis

```
int snd_ac97_mixer (struct snd_ac97_bus * bus, struct
snd_ac97_template * template, struct snd_ac97 ** rac97);
```

Arguments

bus

>   the AC97 bus which codec is attached to

template

>   the template of ac97, including index, callbacks and the private data.

rac97

>   the pointer to store the new ac97 instance.

Description

Creates an Codec97 component. An struct snd_ac97 instance is newly allocated and initialized from the template. The codec is then initialized by the standard procedure.

The template must include the codec number (num) and address (addr), and the private data (private_data).

The ac97 instance is registered as a low-level device, so you don't have to release it manually.

Returns zero if successful, or a negative error code on failure.

snd_ac97_update_power

Name

snd_ac97_update_power — update the powerdown register

Synopsis

int **snd_ac97_update_power** (struct snd_ac97 * *ac97*, int *reg*, int *powerup*);

Arguments

ac97

    the codec instance

reg

    the rate register, e.g. AC97_PCM_FRONT_DAC_RATE

powerup

    non-zero when power up the part

Description

Update the AC97 powerdown register bits of the given part.

snd_ac97_suspend

Name

`snd_ac97_suspend` — General suspend function for AC97 codec

Synopsis

`void` **`snd_ac97_suspend`** `(struct snd_ac97 * ac97);`

Arguments

`ac97`

> the ac97 instance

Description

Suspends the codec, power down the chip.

snd_ac97_resume

Name

`snd_ac97_resume` — General resume function for AC97 codec

Synopsis

`void` **`snd_ac97_resume`** `(struct snd_ac97 * ac97);`

Arguments

`ac97`

    the ac97 instance

Description

Do the standard resume procedure, power up and restoring the old register values.

snd_ac97_tune_hardware

Name

`snd_ac97_tune_hardware` — tune up the hardware

Synopsis

```
int snd_ac97_tune_hardware (struct snd_ac97 * ac97, struct
ac97_quirk * quirk, const char * override);
```

Arguments

ac97

> the ac97 instance

quirk

> quirk list

override

> explicit quirk value (overrides the list if non-NULL)

Description

Do some workaround for each pci device, such as renaming of the headphone (true line-out) control as "Master". The quirk-list must be terminated with a zero-filled entry.

Returns zero if successful, or a negative error code on failure.

snd_ac97_set_rate

LINUX

Kernel Hackers ManualJuly 2010

Name

snd_ac97_set_rate — change the rate of the given input/output.

Synopsis

```
int snd_ac97_set_rate (struct snd_ac97 * ac97, int reg,
unsigned int rate);
```

Arguments

ac97

    the ac97 instance

reg

    the register to change

rate

    the sample rate to set

Description

Changes the rate of the given input/output on the codec. If the codec doesn't support VAR, the rate must be 48000 (except for SPDIF).

The valid registers are AC97_PMC_MIC_ADC_RATE, AC97_PCM_FRONT_DAC_RATE, AC97_PCM_LR_ADC_RATE. AC97_PCM_SURR_DAC_RATE and AC97_PCM_LFE_DAC_RATE are accepted if the codec supports them. AC97_SPDIF is accepted as a pseudo register to modify the SPDIF status bits.

Returns zero if successful, or a negative error code on failure.

snd_ac97_pcm_assign

LINUX

Name

`snd_ac97_pcm_assign` — assign AC97 slots to given PCM streams

Synopsis

```
int snd_ac97_pcm_assign (struct snd_ac97_bus * bus, unsigned
short pcms_count, const struct ac97_pcm * pcms);
```

Arguments

`bus`

   the ac97 bus instance

`pcms_count`

   count of PCMs to be assigned

`pcms`

   PCMs to be assigned

Description

It assigns available AC97 slots for given PCMs. If none or only some slots are available, pcm->xxx.slots and pcm->xxx.rslots[] members are reduced and might be zero.

snd_ac97_pcm_open

LINUX

Name

`snd_ac97_pcm_open` — opens the given AC97 pcm

Synopsis

```
int snd_ac97_pcm_open (struct ac97_pcm * pcm, unsigned int
rate, enum ac97_pcm_cfg cfg, unsigned short slots);
```

Arguments

`pcm`

> the ac97 pcm instance

`rate`

> rate in Hz, if codec does not support VRA, this value must be 48000Hz

`cfg`

> output stream characteristics

`slots`

> a subset of allocated slots (snd_ac97_pcm_assign) for this pcm

Description

It locks the specified slots and sets the given rate to AC97 registers.

snd_ac97_pcm_close

LINUX

Name

snd_ac97_pcm_close — closes the given AC97 pcm

Synopsis

int **snd_ac97_pcm_close** (struct ac97_pcm * *pcm*);

Arguments

pcm

    the ac97 pcm instance

Description

It frees the locked AC97 slots.

snd_ac97_pcm_double_rate_rules

LINUX

Name

snd_ac97_pcm_double_rate_rules — set double rate constraints

Synopsis

```
int snd_ac97_pcm_double_rate_rules (struct snd_pcm_runtime *
runtime);
```

Arguments

runtime

> the runtime of the ac97 front playback pcm

Description

Installs the hardware constraint rules to prevent using double rates and more than two channels at the same time.

3.3. Virtual Master Control API

snd_ctl_make_virtual_master

LINUX

Kernel Hackers ManualJuly 2010

Name

snd_ctl_make_virtual_master — Create a virtual master control

Synopsis

```
struct snd_kcontrol * snd_ctl_make_virtual_master (char *
name, const unsigned int * tlv);
```

Arguments

name

>name string of the control element to create

tlv

>optional TLV int array for dB information

Description

Creates a virtual matster control with the given name string. Returns the created control element, or NULL for errors (ENOMEM).

After creating a vmaster element, you can add the slave controls via `snd_ctl_add_slave` or `snd_ctl_add_slave_uncached`.

The optional argument `tlv` can be used to specify the TLV information for dB scale of the master control. It should be a single element with #SNDRV_CTL_TLVT_DB_SCALE, #SNDRV_CTL_TLV_DB_MINMAX or #SNDRV_CTL_TLVT_DB_MINMAX_MUTE type, and should be the max 0dB.

snd_ctl_add_slave

LINUX

Kernel Hackers ManualJuly 2010

Name

`snd_ctl_add_slave` — Add a virtual slave control

Synopsis

```
int snd_ctl_add_slave (struct snd_kcontrol * master, struct
snd_kcontrol * slave);
```

Arguments

master

    vmaster element

slave

    slave element to add

Description

Add a virtual slave control to the given master element created via `snd_ctl_create_virtual_master` beforehand. Returns zero if successful or a negative error code.

All slaves must be the same type (returning the same information via info callback). The fucntion doesn't check it, so it's your responsibility.

Also, some additional limitations: at most two channels, logarithmic volume control (dB level) thus no linear volume, master can only attenuate the volume without gain

snd_ctl_add_slave_uncached

LINUX

Kernel Hackers ManualJuly 2010

Name

`snd_ctl_add_slave_uncached` — Add a virtual slave control

Synopsis

```
int snd_ctl_add_slave_uncached (struct snd_kcontrol * master,
struct snd_kcontrol * slave);
```

Arguments

master

>   vmaster element

slave

>   slave element to add

Description

Add a virtual slave control to the given master. Unlike `snd_ctl_add_slave`, the element added via this function is supposed to have volatile values, and get callback is called at each time quried from the master.

When the control peeks the hardware values directly and the value can be changed by other means than the put callback of the element, this function should be used to keep the value always up-to-date.

Chapter 4. MIDI API

4.1. Raw MIDI API

snd_rawmidi_receive

Name

`snd_rawmidi_receive` — receive the input data from the device

Synopsis

```
int snd_rawmidi_receive (struct snd_rawmidi_substream *
substream, const unsigned char * buffer, int count);
```

Arguments

substream

    the rawmidi substream

buffer

    the buffer pointer

count

    the data size to read

Description

Reads the data from the internal buffer.

Returns the size of read data, or a negative error code on failure.

snd_rawmidi_transmit_empty

Name

`snd_rawmidi_transmit_empty` — check whether the output buffer is empty

Synopsis

```
int snd_rawmidi_transmit_empty (struct snd_rawmidi_substream *
substream);
```

Arguments

substream

> the rawmidi substream

Description

Returns 1 if the internal output buffer is empty, 0 if not.

snd_rawmidi_transmit_peek

Name

snd_rawmidi_transmit_peek — copy data from the internal buffer

Synopsis

int **snd_rawmidi_transmit_peek** (struct snd_rawmidi_substream * *substream*, unsigned char * *buffer*, int *count*);

Arguments

substream

> the rawmidi substream

buffer

> the buffer pointer

count

> data size to transfer

Description

Copies data from the internal output buffer to the given buffer.

Call this in the interrupt handler when the midi output is ready, and call snd_rawmidi_transmit_ack after the transmission is finished.

Returns the size of copied data, or a negative error code on failure.

snd_rawmidi_transmit_ack

Name

snd_rawmidi_transmit_ack — acknowledge the transmission

Synopsis

int **snd_rawmidi_transmit_ack** (struct snd_rawmidi_substream *
substream, int *count*);

Arguments

substream

   the rawmidi substream

count

   the tranferred count

Description

Advances the hardware pointer for the internal output buffer with the given size and
updates the condition. Call after the transmission is finished.

Returns the advanced size if successful, or a negative error code on failure.

snd_rawmidi_transmit

Name

`snd_rawmidi_transmit` — copy from the buffer to the device

Synopsis

```
int snd_rawmidi_transmit (struct snd_rawmidi_substream *
substream, unsigned char * buffer, int count);
```

Arguments

`substream`

    the rawmidi substream

`buffer`

    the buffer pointer

`count`

    the data size to transfer

Description

Copies data from the buffer to the device and advances the pointer.

Returns the copied size if successful, or a negative error code on failure.

snd_rawmidi_new

Name

snd_rawmidi_new — create a rawmidi instance

Synopsis

```
int snd_rawmidi_new (struct snd_card * card, char * id, int
device, int output_count, int input_count, struct snd_rawmidi
** rrawmidi);
```

Arguments

card

the card instance

id

the id string

device

the device index

output_count

the number of output streams

input_count

the number of input streams

rrawmidi

the pointer to store the new rawmidi instance

Description

Creates a new rawmidi instance. Use `snd_rawmidi_set_ops` to set the operators to the new instance.

Returns zero if successful, or a negative error code on failure.

snd_rawmidi_set_ops

LINUX

Kernel Hackers ManualJuly 2010

Name

`snd_rawmidi_set_ops` — set the rawmidi operators

Synopsis

void **snd_rawmidi_set_ops** (struct snd_rawmidi * *rmidi*, int *stream*, struct snd_rawmidi_ops * *ops*);

Arguments

rmidi

  the rawmidi instance

stream

  the stream direction, SNDRV_RAWMIDI_STREAM_XXX

ops

  the operator table

Description

Sets the rawmidi operators for the given stream direction.

4.2. MPU401-UART API

snd_mpu401_uart_interrupt

Name

`snd_mpu401_uart_interrupt` — generic MPU401-UART interrupt handler

Synopsis

`irqreturn_t` **`snd_mpu401_uart_interrupt`** `(int *irq*, void * *dev_id*);`

Arguments

irq

> the irq number

dev_id

> mpu401 instance

Description

Processes the interrupt for MPU401-UART i/o.

snd_mpu401_uart_interrupt_tx

Name

`snd_mpu401_uart_interrupt_tx` — generic MPU401-UART transmit irq handler

Synopsis

```
irqreturn_t snd_mpu401_uart_interrupt_tx (int irq, void *
dev_id);
```

Arguments

irq

    the irq number

dev_id

    mpu401 instance

Description

Processes the interrupt for MPU401-UART output.

snd_mpu401_uart_new

Name

`snd_mpu401_uart_new` — create an MPU401-UART instance

Synopsis

```
int snd_mpu401_uart_new (struct snd_card * card, int device,
unsigned short hardware, unsigned long port, unsigned int
info_flags, int irq, int irq_flags, struct snd_rawmidi **
rrawmidi);
```

Arguments

`card`

the card instance

`device`

the device index, zero-based

`hardware`

the hardware type, MPU401_HW_XXXX

`port`

the base address of MPU401 port

`info_flags`

bitflags MPU401_INFO_XXX

`irq`

the irq number, -1 if no interrupt for mpu

irq_flags

> the irq request flags (SA_XXX), 0 if irq was already reserved.

rrawmidi

> the pointer to store the new rawmidi instance

Description

Creates a new MPU-401 instance.

Note that the rawmidi instance is returned on the rrawmidi argument, not the mpu401 instance itself. To access to the mpu401 instance, cast from rawmidi->private_data (with struct snd_mpu401 magic-cast).

Returns zero if successful, or a negative error code.

irq_flags

Chapter 5. Proc Info API

5.1. Proc Info Interface

snd_iprintf

Name

`snd_iprintf` — printf on the procfs buffer

Synopsis

```
int snd_iprintf (struct snd_info_buffer * buffer, const char *
fmt,  ...);
```

Arguments

buffer

>   the procfs buffer

fmt

>   the printf format

...

>   variable arguments

Description

Outputs the string on the procfs buffer just like `printf`.

Returns the size of output string.

snd_info_get_line

Name

`snd_info_get_line` — read one line from the procfs buffer

Synopsis

`int` **`snd_info_get_line`** `(struct snd_info_buffer *` *`buffer`*`, char *` *`line`*`, int` *`len`*`);`

Arguments

`buffer`

   the procfs buffer

`line`

   the buffer to store

`len`

   the max. buffer size - 1

Description

Reads one line from the buffer and stores the string.

Returns zero if successful, or 1 if error or EOF.

snd_info_get_str

Name

`snd_info_get_str` — parse a string token

Synopsis

```
const char * snd_info_get_str (char * dest, const char * src,
int len);
```

Arguments

dest

    the buffer to store the string token

src

    the original string

len

    the max. length of token - 1

Description

Parses the original string and copy a token to the given string buffer.

Returns the updated pointer of the original string so that it can be used for the next call.

snd_info_create_module_entry

LINUX

Kernel Hackers ManualJuly 2010

Name

`snd_info_create_module_entry` — create an info entry for the given module

Synopsis

`struct snd_info_entry *` **`snd_info_create_module_entry`** `(struct module * module, const char * name, struct snd_info_entry * parent);`

Arguments

module

the module pointer

name

the file name

parent

the parent directory

Description

Creates a new info entry and assigns it to the given module.

Returns the pointer of the new instance, or NULL on failure.

snd_info_create_card_entry

LINUX

Kernel Hackers ManualJuly 2010

Name

snd_info_create_card_entry — create an info entry for the given card

Synopsis

```
struct snd_info_entry * snd_info_create_card_entry (struct
snd_card * card, const char * name, struct snd_info_entry *
parent);
```

Arguments

card

　　the card instance

name

　　the file name

parent

　　the parent directory

Description

Creates a new info entry and assigns it to the given card.

Returns the pointer of the new instance, or NULL on failure.

snd_card_proc_new

Name

`snd_card_proc_new` — create an info entry for the given card

Synopsis

```
int snd_card_proc_new (struct snd_card * card, const char *
name, struct snd_info_entry ** entryp);
```

Arguments

card

> the card instance

name

> the file name

entryp

> the pointer to store the new info entry

Description

Creates a new info entry and assigns it to the given card. Unlike `snd_info_create_card_entry`, this function registers the info entry as an ALSA device component, so that it can be unregistered/released without explicit call. Also, you don't have to register this entry via `snd_info_register`, since this will be registered by `snd_card_register` automatically.

The parent is assumed as card->proc_root.

For releasing this entry, use `snd_device_free` instead of `snd_info_free_entry`.

Returns zero if successful, or a negative error code on failure.

snd_info_free_entry

Name

`snd_info_free_entry` — release the info entry

Synopsis

void **snd_info_free_entry** (struct snd_info_entry * *entry*);

Arguments

entry

the info entry

Description

Releases the info entry. Don't call this after registered.

snd_info_register

Name

`snd_info_register` — register the info entry

Synopsis

`int` **`snd_info_register`** `(struct snd_info_entry * entry);`

Arguments

entry

    the info entry

Description

Registers the proc info entry.

Returns zero if successful, or a negative error code on failure.

Chapter 6. Miscellaneous Functions

6.1. Hardware-Dependent Devices API

snd_hwdep_new

Name

`snd_hwdep_new` — create a new hwdep instance

Synopsis

```
int snd_hwdep_new (struct snd_card * card, char * id, int
device, struct snd_hwdep ** rhwdep);
```

Arguments

card

the card instance

id

the id string

device

the device index (zero-based)

rhwdep

the pointer to store the new hwdep instance

Description

Creates a new hwdep instance with the given index on the card. The callbacks (hwdep->ops) must be set on the returned instance after this call manually by the caller.

Returns zero if successful, or a negative error code on failure.

6.2. Jack Abstraction Layer API

snd_jack_new

Name

`snd_jack_new` — Create a new jack

Synopsis

```
int snd_jack_new (struct snd_card * card, const char * id, int
type, struct snd_jack ** jjack);
```

Arguments

`card`

   the card instance

`id`

   an identifying string for this jack

type

>   a bitmask of enum snd_jack_type values that can be detected by this jack

jjack

>   Used to provide the allocated jack object to the caller.

Description

Creates a new jack object.

Returns zero if successful, or a negative error code on failure. On success jjack will be initialised.

snd_jack_set_parent

Name

snd_jack_set_parent — Set the parent device for a jack

Synopsis

```
void snd_jack_set_parent (struct snd_jack * jack, struct
device * parent);
```

Arguments

jack

>   The jack to configure

parent

> The device to set as parent for the jack.

Description

Set the parent for the jack input device in the device tree. This function is only valid prior to registration of the jack. If no parent is configured then the parent device will be the sound card.

snd_jack_report

LINUX

Kernel Hackers ManualJuly 2010

Name

`snd_jack_report` — Report the current status of a jack

Synopsis

```
void snd_jack_report (struct snd_jack * jack, int status);
```

Arguments

jack

> The jack to report status for

status

> The current status of the jack

6.3. ISA DMA Helpers

snd_dma_program

Name

`snd_dma_program` — program an ISA DMA transfer

Synopsis

```
void snd_dma_program (unsigned long dma, unsigned long addr,
unsigned int size, unsigned short mode);
```

Arguments

dma

   the dma number

addr

   the physical address of the buffer

size

   the DMA transfer size

mode

   the DMA transfer mode, DMA_MODE_XXX

Description

Programs an ISA DMA transfer for the given buffer.

snd_dma_disable

Name

snd_dma_disable — stop the ISA DMA transfer

Synopsis

void **snd_dma_disable** (unsigned long *dma*);

Arguments

dma

   the dma number

Description

Stops the ISA DMA transfer.

snd_dma_pointer

Name

`snd_dma_pointer` — return the current pointer to DMA transfer buffer in bytes

Synopsis

`unsigned int` **`snd_dma_pointer`** `(unsigned long` *`dma`*`, unsigned int` *`size`*`);`

Arguments

`dma`

the dma number

`size`

the dma transfer size

Description

Returns the current pointer in DMA tranfer buffer in bytes

6.4. Other Helper Macros

snd_register_device

Name

`snd_register_device` — Register the ALSA device file for the card

Synopsis

```
int snd_register_device (int type, struct snd_card * card, int
dev, const struct file_operations * f_ops, void *
private_data, const char * name);
```

Arguments

`type`

the device type, SNDRV_DEVICE_TYPE_XXX

`card`

the card instance

`dev`

the device index

`f_ops`

the file operations

`private_data`

user pointer for f_ops->`open`

`name`

the device file name

Description

Registers an ALSA device file for the given card. The operators have to be set in reg parameter.

This function uses the card's device pointer to link to the correct struct device.

Returns zero if successful, or a negative error code on failure.

snd_printk

Name

`snd_printk` — printk wrapper

Synopsis

snd_printk (*fmt, args...*);

Arguments

fmt

> format string

args...

> variable arguments

Description

Works like `printk` but prints the file and the line of the caller when configured with CONFIG_SND_VERBOSE_PRINTK.

snd_printd

Name

snd_printd — debug printk

Synopsis

snd_printd (*fmt, args...*);

Arguments

fmt

format string

args...

variable arguments

Description

Works like snd_printk for debugging purposes. Ignored when
CONFIG_SND_DEBUG is not set.

snd_BUG

Name

`snd_BUG` — give a BUG warning message and stack trace

Synopsis

snd_BUG (void);

Arguments

None

Description

Calls `WARN` if CONFIG_SND_DEBUG is set. Ignored when CONFIG_SND_DEBUG is not set.

snd_BUG_ON

Name

`snd_BUG_ON` — debugging check macro

Synopsis

snd_BUG_ON (*cond*);

Arguments

cond

>   condition to evaluate

Description

When CONFIG_SND_DEBUG is set, this macro evaluates the given condition, and call WARN and returns the value if it's non-zero.

When CONFIG_SND_DEBUG is not set, this just returns zero, and the given condition is ignored.

NOTE

the argument won't be evaluated at all when CONFIG_SND_DEBUG=n. Thus, don't put any statement that influences on the code behavior, such as pre/post increment, to the argument of this macro. If you want to evaluate and give a warning, use standard WARN_ON.

snd_printdd

LINUX

Kernel Hackers ManualJuly 2010

Name

snd_printdd — debug printk

Synopsis

snd_printdd (*format,* *args...*);

Arguments

format

format string

args...

variable arguments

Description

Works like snd_printk for debugging purposes. Ignored when CONFIG_SND_DEBUG_VERBOSE is not set.
